

Warehouse Management

Apprise® Warehouse Management gives you the power to change your warehouse from a cost driver into a strategic competitive advantage. Respond quickly to customer requirements with flexible and efficient receiving, putaway, inventory allocation, picking, replenishment, delivery and more.

Improved space utilization

Flexible bin, zone, and location management for single or multiple warehouses ensures scarce space is most efficiently utilized. Track and manage workflow and inventory more effectively with space allocation for various aspects of the distribution process, such as pending shipments and return receipts. Speed the receiving process and optimize space management based on product type, size, and inventory turnover rate with streamlined putaway capabilities.

Enhanced inventory management

Lot and serial tracking enable you to manage and validate returns, as well as meet customer specific reorder needs quickly and efficiently. Minimize inventory discrepancies with flexible inventory counting options, including cycle and physical inventory counting. Improve shipment tracking and management with integrated bills of lading (BOL) and packing slips. Utilize real-time “as of” inventory valuation to gain insight into inventory costs for improved management and control.

Productivity and efficiency gains

Leverage flexible picking options, such as speed bins and wave picking, to streamline the picking process and drive improvements in labor productivity and delivery efficiencies. Utilize advanced cartonization tools to pre-allocate cartons during pick ticket creation for improved efficiencies and reduced shipping costs. Implement various warehouse technologies, such as wireless devices, to automate data collection, reduce warehouse errors, and to capitalize on improved picking and labor efficiencies. Optimize your purchasing, stocking, picking, and selling processes with flexible, multiple units of measure. Leverage integrated customer routing guides and freight rules to automatically calculate carrier and freight terms.

Flexibility to meet customer demands

Maximize your revenue potential by meeting customer demands, with customer specific UCC 128 labeling, flexible units of measure, and multiple UPC codes per SKU. Meet mass merchant compliance requirements with integrated EDI and shipment capabilities. Get ahead of emerging customer requirements for delivery efficiency gains by enabling your warehouses with dynamic routing. And while our integrated WMS is built to include all the tools you need, Apprise ERP can also integrate with your existing third-party Warehouse Management System.

Optimize your warehouses with improved data visibility, inventory accuracy and labor efficiencies. Control overages, shortages & shrinkage.

Apprise® Warehouse Management

- > **Single or multiple warehouses and inter-warehouse transfers** — flexibility and control
- > **Bin, zone and location management** — improved space utilization
- > **Speed bins** — bulk picking for optimized labor efficiencies
- > **Not available bins** — returns management and tracking
- > **Lay down areas** — streamlined partial order and pending shipment management
- > **Paper, label, and wireless picking** — flexible options to meet your current and future warehouse needs
- > **Integrated wireless devices** — automate data collection; reduce warehouse errors; improve labor efficiencies
- > **Wave picking** — efficiency gains for delivery
- > **Advanced cartonization tools** — pre-allocate cartons for efficiency gains and reduced shipping costs
- > **Labor management** — productivity insight and cost management
- > **UCC 128 labeling** — meet customer requirements while managing and reducing chargebacks
- > **Integrated EDI** - self-managed or Apprise Managed EDI Services
- > **Lot and serial tracking** — enhanced inventory tracking and management for reorders and returns
- > **Various units of measure for purchasing, stocking, picking and selling** — improved picking efficiencies; flexibility for unique customer requirements
- > **Multiple UPC codes per SKU** — enhanced flexibility and control
- > **Directed putaway** — more effective receiving and optimized warehouse space utilization
- > **Cross docking** — increase efficiencies by quickly filling back orders or priority customer orders
- > **Integrated customer routing guides and freight rules** — automatically calculate carrier and freight terms; streamline freight management and tracking
- > **Fleet delivery** — improved picking by truck and customer routes
- > **Shipping interfaces** — seamlessly interface with common shipping manifest systems such as UPS® and FedEx®
- > **Dynamic routing** — meet emerging customer delivery requirements with flexibility and control
- > **Cycle and physical inventory counting** — accurate views of inventory status; tools for discrepancy management
- > **Inventory valuation reports** — “as of” inventory values based on flexible costing standards
- > **Bills of Lading (BOL)** — accurate shipment management meeting GS1 standards
- > **Packing slips** — order level shipment tracking and management
- > **Robust information systems** — real-time access and drill-down capabilities for maximum warehouse insights and control
- > **Third-party WMS integration** - Apprise ERP can connect with your existing WMS for streamlined data transfers

Making your supply chain better, so you can run a better business

Apprise is focused on solving the unique supply chain challenges of consumer goods manufacturers, importers and distributors. With industry-specific ERP software and a global team that understands your business, helping our clients achieve more is what we do best.
